

Loop In Batch File

In Batch Scripts , There Is Direct Implementation Of Loop Using For Loop Only

Command :

for %%variablename in list do something

Note

- Write variablename In One Character like y
- In Batch Scripts Loop , Variable Is Written as %%variablename Instead Of %variablename%
- List Is The Value For Which Loop Will Execute

Example :

@echo off

for %%y in (1,5,7) do echo %%y

pause

Looping Through Range :

for /l %%variablename in (LowerLimit,Increment,Upperlimit) do something

Where :

/l Specify That For Loop Is Iterating Through A Range Of Values

Example :

@echo off

for /l %%y in (0,5,100) do echo %%y

pause
